

CELEBRATING 10 YEARS OF PROGRESS - BOLDLY MOVING FORWARD TOGETHER

Ten years ago, the ALS Ice Bucket Challenge became a global phenomenon – a simple, lighthearted concept became a testament to the powerful force of social media in driving real-world impact.

The challenge showcased how collective efforts can fuel scientific research and support those in need, bringing ALS to the forefront of public consciousness, informing millions about the disease and its effects.

Funds from the challenge contributed to scientific advancements, including the discovery of new ALS genes and improved understanding of the disease's mechanisms.

The ALS Network honors the history and tremendous momentum generated by this extraordinary show of support for the ALS community.

Let's continue this progress! We invite you to take action - through advocating, participating, or donating. It makes a difference and brings us closer to the day we cure ALS together.

GLOBALLY

The 2014 ALS Ice Bucket Challenge generated unprecedented support:

17 MILLION
people participated

\$220 + MILLION
raised worldwide

159 COUNTRIES
around the globe

LOCALLY - IN CALIFORNIA, HAWAII, AND THE US

Over the past ten years, fueled by the ALS Ice Bucket Challenge and your steadfast support, the ALS Network has increased our impact and capacity by investing in our mission-critical activities. Some key achievements include:

500% INCREASE
in medical equipment/communication devices loaned free-of-charge each year

36% MORE clients and families living with ALS served

Creation of the California ALS Registry, to provide critical information on the incidence and prevalence of ALS

500% INCREASE
in financial grants to families

Multi-year public funding for the **ALS Network's wraparound model of care**

50% INCREASE
of monthly connection group meetings

\$15M+ INVESTED
in ALS research to support groundbreaking science and moonshots to accelerate therapy development

100% INCREASE
in partnerships with ALS clinics

Significant advocacy efforts at federal and state levels resulting in increased government **funding and support for ALS research and care**
